

MOQ / Packing / Sample Route Sheet

Use this sheet to prepare a practical packaging inquiry before sampling. Final MOQ, sample route, packing data, and lead time depend on product size, material, coating, print route, tooling, stock availability, and destination market.

What buyer sends	What Nexpack returns	Next decision
Product family, size, food use, material or coating preference, print route, quantity by SKU, destination, and launch timing.	Material path, sample route, MOQ direction, carton packing, CBM/loading data, lead-time direction, and open technical questions.	Choose stock sample, custom sample, artwork proofing, film or lid fit test, or pre-production confirmation.

1. Required inquiry fields

- Product family: paper cups, salad bowls, soup cups, takeaway boxes, pizza boxes, MAP paper trays, film-seal bowls, lids, bags, or custom format.
- Size details: oz/ml, L*W*H mm, top and bottom size, rim diameter, capacity, current sample photo, or target drawing.
- Food use: hot, chilled, frozen, greasy, sauced, beverage, delivery, retail display, or MAP shelf-life program.
- Material path: kraft, white paper, paperboard GSM, PE, PLA, aqueous coating, grease barrier, EVOH film, lid or sealing film route.
- Print route: plain stock, logo print, flexo, offset, Pantone, CMYK, carton mark, and artwork file status.
- Commercial plan: quantity by size/SKU, sample need, destination market, certification route, target packing, and launch date.

2. Product route checklist

Product route	Inputs that affect MOQ and price	Sample and packing checks
Paper cups	Cup size, rim diameter, wall type, paper GSM, coating, lid fit, artwork colors, quantity by size.	Stock sample if available; custom print proof after artwork and material check; carton pack and lid match confirmed by size.
Paper bowls and soup cups	Capacity, top diameter, height, coating, lid material, hot/chilled use, print route, SKU list.	Bowl/lid fit sample, coating route, carton packing, and loading data confirmed before repeat order.
Takeaway boxes and food trays	Food weight, sauce/grease level, box structure, window or compartment need, coating, print, quantity.	Structure sample, grease/moisture review, carton dimensions, and export packing direction.
MAP trays and film-seal bowls	Food type, target shelf life, tray geometry, EVOH film route, sealing machine model, test need.	Rim and film fit test, MAP sample route, loading count, and food-contact document path.
Pizza boxes	Inch size, exact L*W*H mm, kraft or white board, flute, venting, print method, monthly volume.	Plain or printed sample path, board strength review, carton packing, and SKU loading plan.

Packing, sample, and quotation path

For serious procurement, ask for the route below instead of only asking for unit price. This helps both sides avoid wrong samples, missing packing data, and unclear lead-time assumptions.

3. Packing data to request

Packing field	Why it matters
PCS/CTN and inner pack	Used for warehouse receiving, distributor quotation, and SKU comparison.
Carton L*W*H and gross weight	Needed for freight estimate, pallet plan, and container loading direction.
20ft / 40HQ loading count	Useful for importers and distributors comparing landed cost by container.
Carton mark and barcode need	Confirms private-label, retail, distributor, or chain-store receiving requirements.
Sample route and sample lead time	Separates stock sample, blank custom sample, printed sample, and MAP sealing test sample.
Production lead-time direction	Depends on material, print, tooling, order quantity, and current factory schedule.

4. Message template

Hello Nexpack, please send the MOQ / Packing / Sample Route Sheet for my project. Product: [product family and size]. Food use: [hot/chilled/MAP/delivery/retail]. Material or coating: [kraft/white/PE/PLA/aqueous/EVOH/other]. Print: [plain/logo/flexo/offset/colors]. Quantity: [pcs per size or month]. Destination: [country/city]. Please confirm suitable material, sample route, MOQ, carton packing, loading data, and lead time.
